

Stel 65

Certified Casing

65 C

LAKESIDE STEEL MANUFACTURES OIL WELL CASING TO API 5CT SPECIFICATIONS (API Q1 LICENSED) IN OUTSIDE DIAMETERS RANGING FROM 4.500" TO 8.625". PROPRIETARY GRADE STEL 65 C, IN THE "AS WELDED" CONDITION, IS DESIGNED FOR APPLICATIONS WHERE HIGHER INTERNAL STRENGTH IS REQUIRED.

The Standard Grade used in the Oil & Gas Market Place is J55, which meets a minimum yield strength of 55,000 PSI

Lakeside's 65 C Casing has been designed by Lakeside to meet a higher minimum yield strength of 65,000 PSI

Lakeside's 65 C Casing is an "off-the-mill" product with improved mechanical properties – 65,000 PSI minimum yield strength – attained through use of a proprietary steel grade

65 C Casing allows customers to reduce wall thickness when compared to using J55 products and still achieve the same results

Increased yield strength – reduced wall thickness – better value for our customers
